

### **ATCOwood™ plank and wood edge, veneer and marquetry tops.**

**ATCOwood™** tops are produced by a domestic supplier whose entire production is tables. We have made a good arrangement with them to provide us with superior grade, competitively priced wood plank, wood edge veneer, and laminate surface, tops as well as self-edge laminate tops, T-molding edge tops and padded tops. In 2014 the line of marquetry veneer tables was expanded. A new extra-durable UV cured finish trade-marked ScratchShield™ was added late in 2015.

The most striking thing about ATCOwood™ tops is their fine furniture appearance, yet it is the very finishing process that provides this appearance that makes the surface extremely durable. In 2009 we made an upgraded, extremely durable Urethane finish standard while most competitors continued with conversion varnish. The ScratchShield™ finish goes beyond everything else available in providing a durable scratch resistant finish. A thick, poured look urethane is also available at an upcharge. Edge treatments include block also called eased edge, full and half bullnose, wing and reverse wing, traditional, and Ogee.

Custom sizes and shapes are available, and stains can be matched for a small up-charge. For the wood edge tops, laminate tops, and T-mold tops, most widely available laminates from Formica, Wilsonart, Nevamar, Laminart, and Abet Laminate are available as well as specialty laminate suppliers. Veneers for wood-edge tops are also available in various patterns. Marquetry, inlaid borders, exotic wood veneers and special stain effects are also available. One and one-quarter inch thickness is standard but one and three-quarter thickness with a drop edge is also available.

Delivery is normally 4 weeks, but an occasional emergency can be handled.
