

## Cast aluminum seating and tables

ATC popularized the concept of a restaurant chair made of cast aluminum that can be left outside all year around. Our original factory was in Spain and the quality was extraordinary, but the “China Price” made it impossible to continue with Spain. While many other manufacturers of cast aluminum patio furniture attempt to sell their chairs to restaurants, it is extremely important to note that *their* chairs are designed for the home patio. The size of *their* chairs, angles of the seats and backs, and general comfort are NOT conducive to a good restaurant experience. **Our** chairs are designed for dining! The seat is almost flat and the back pitch is comfortable when seated to dine. The size of the chairs permits typical restaurant table spacing and stacking.

Our cast aluminum chairs are made in China of 99% pure aluminum. They are made in a quality foundry with high standards, and 100% of the process is “in house” from mold making to finishing. We have an exclusive on the designs presented, and can expand the line as we go along.

You will note that the price points on the **Empire**, **Director**, **Cape Cod** and **Nantucket** are excellent. The **Empire** is a deco look cast armchair which has been redesigned for added strength. The **Director** is an exclusive design for us and is entirely cast. Only arm chairs and barstools are now available from stock, as side chairs are not durable enough for contract use. The **Cape Cod** and **Nantucket** are hybrid chairs with a tubular frame and cast seat and back. The Cape Cod has a round tube while the Nantucket is more of a rectangle on the front and square on the back. Cushions are not necessary for comfort but are an option and have ties. **Nantucket** and **Cape Cod** offer a two person bench. There has been a design improvement of the “front-leg-to-seat-joint” adding strength in the **Empire** and **Director** chairs, a new 18” square x 18” high cast table and a very large 47” x 102” **Weave** table. We have a new as yet unnamed hybrid chair we are considering including this year, which has a slightly larger size more attuned to country clubs and higher end restaurants.

**Weave** cast aluminum tables are stocked in popular sizes. These are tables complete with bases so you cannot use different bases. The surface is a weave look but flat, so wine glasses will not tip.
