

## Resin Seating

**Our Resin Seating:** is sourced from one of the leading plastics companies in Turkey. Their expertise is large scale injection molding and they are truly experts. They have pioneered the gas injection system which allows legs to be made tubular and therefore stronger, and also to open the imitation weaving on the Florida/Ibiza series to ventilate. In addition, the use of chopped fiberglass in the resin makes it very strong. The Martinique side chair is used by Sea World and has passed the BIFMA tests. Resin chairs are very cost effective, colorful, and ideal for seasonal installations.

**Domenica, Martinique, and Ibiza and Florida side chair and barstools** are outstanding resin chairs. Finely chopped glass fiber is added to the resin to create an extremely strong chair. The chair shells are molded in resin, and in the **Domenica** the legs are matte anodized aluminum molded directly into the shells. The **Martinique** chairs are entirely molded and extremely strong and comfortable. **Domenica** barstools nest four high. New chairs introduced last year are the **Napoleon Wedding Chair**...similar to the Chivari chair, but much more durable. The **Soho** is a high style, small footprint stackable side chair perfect for sidewalk cafes. The **Daytona** sculpted side chair and **Panama** sculpted club chair are new and should sell well. Small footprints, large comfort, small prices, large on looks these are replacing the Capri and Verona. Imitation weaving in expresso!

The **Nessie** polycarbonate chairs were discontinued as a catalog item last year due to disappointing sales, but it is still available and can be ordered specially.  
The **Kiawah** line is discontinued.
